The outbreak of the Ebola Virus Disease (EVD) in West Africa garnered the attention of the world and resulted in a massive international response. In total, over 15,000 cases of EVD were confirmed, resulting in over 10,000 deaths in the three West African countries that were most affected - Liberia, Sierra Leone, and Guinea. This lecture will present the experiences of two responders who served in different roles in combating EVD: Andrew Pugh will share observations and lessons learned from working in an Ebola treatment center in Sierra Leone and later managing a public health campaign in Guinea. Dr. Steven Mischler will discuss his role working in the community health centers and district hospitals to help train the medical staff, the military, and community leaders on methods to prevent and control the spread of EVD.

All Are Welcome!

Please join us. Light refreshments will be served.
